When an employee...

- Doesn't feel well and has COVID-19-like symptoms
  - Symptoms include sore throat, cough, fever, body aches, runny nose, diarrhea, and/or shortness of breath not explained by another known medical condition

- Tests positive for COVID-19

- Has symptoms and has been in close contact with someone who is COVID positive, regardless of where the COVID-positive individual works or lives.

- Lives with someone who has been in close contact with someone who is COVID positive regardless of where the COVID-positive individual works or lives

**Definition of close contact:** Close contact occurs when you have been within 6 feet of a confirmed COVID-19-positive individual for greater than 15 accumulated minutes starting from 48 hours before the start of their symptoms until they have been deemed non-infectious. In a medical setting, contact with secretions or aerosol-generating procedures without PPE may also be considered a close contact, as would direct contact with secretions from a cough or sneeze in a non-medical setting.

1. Stay home or go home
2. Consult with supervisor about using leave or working from home
3. Complete the screening form in One.UF. This may include arranging for a test or to notify of positive test
4. Employee should consult with personal physician, if necessary

If STP counseling rules out concern, employee may return to work once they feel able. No other action is needed

If negative

If STP confirms concern, employee will be withheld from campus via database. Testing may be arranged.

- “Withheld from campus” triggers email to UFHR, supervisor of record, and employee

If positive

At day 10, STP will contact employee to determine if employee is deemed to still be infectious. If so, employee will be asked to continue to isolate (if symptoms persist) or otherwise will be cleared to return to work

Variables of timing include when the person first exhibited symptoms or came into close contact with someone who tested positive

While clearance via STP is preferred, if employee tests positive and stays home (isolates) for 10 days and has no fever for 1 day (without medication) and has improvement in overall symptoms, employee may return to work per normal sick leave procedures. The employee should contact STP directly to ensure status is changed in database

UFHR tracks employee's 10- to 14-day window as additional window

Employee must notify supervisor in keeping with department's sick leave guidance and the appropriate HRL. UF requires that employees notify supervisor, HRL, or UFHR if they test positive

The department should arrange for the employee's workplace to be cleaned, but no extraordinary measures are required. See here for UF Health cleaning guidance

The HRL should contact UFHR. UFHR will provide communication appropriate to share with the organization
